APPENDIX.

PHYTOLACCA DECANDRA.

It has been already stated that the inconveniences in the emetic operation of this plant are its slow commencement, long continuance, and occasional narcotic effect. I have, since writing the article, become acquainted with instances of hypercatharsis, following the employment of this medicine in large doses. A physician informed me that having himself occasion for an emetic, he took twenty grains of Pulv. Phytolaccæ, which not operating readily he took twenty more within an hour. This large quantity brought on severe vomiting, which continued until his strength was exhausted. A hypercatharsis followed attended with inflammation of the bowels from which he was a week in recovering. In a few other instances I have known a decided effect take place on the retina, producing blindness for two or three
